

The Body Sculptor

Dr. Hall has a passion for the art and science of fat removal.

Dr. William Hall, MD, focuses solely on liposculpture and the Brazilian Butt Lift at his practice, Infini Cosmetic Associates. By offering strictly services that enhance the body and face, Dr. Hall believes in a philosophy of focusing his attention on one specific area- in this case liposuction coupled with personalized individual care. Dr. Hall has achieved thousands of exceptional results for his patients thanks to his precision and diligent attention to detail while focusing on providing a caring and relaxing environment.

Originally from a small midwestern town in Iowa, Dr. Hall had a vision 20 years ago to open a clinic to specialize in just liposculpture. "We are the experts in modern liposculpting techniques, fat transfers, Brazilian Butt Lifts, breast augmentation with fat, Botox, facial fillers, lip enhancement, and a full aesthetics suite of services including facials, peels, lasers, and products," Dr. Hall shares.

With one of the largest and most

comprehensive liposuction practice in the southwest, Dr. Hall is able to provide the safest, most contemporary, and minimally invasive cosmetic procedures including one of the latest and most advanced techniques in Skin tightening: Renuvion J- plasma. Renuvion J-Plasma is a non-surgical procedure for skin tightening that tightens and refreshes loose skin without the need for invasive surgery, extended downtime, or large surgical scars. "This precision repair is unique because we can apply controlled heat to target specific areas for skin tightening," Dr Hall shares.

Besides Renuvion, the procedure everyone is talking about is Liposculpture with a Brazilian Butt Lift. With unparalleled safety and minimal discomfort, the popular procedure has quickly become what Dr. Hall is known for. "With little to no downtime and much less bruising than traditional methods, more individuals are opting to finally get rid of those love handles and add curves," he shares.

Dr. Hall reveals that Liposculpture

is beneficial for patients whose muscle definition is camouflaged by excess fat. He uses his artistic touch to strategically remove fat and reshape the target area. "After the stubborn fat deposits are suctioned away, your body contours will be more flattering with greater tone and definition," he says.

In addition to practicing the art of fat removal, Dr. Hall educates his peers. "I have taught and lectured physicians from all over the world on our special form of fat removal," he says. Seeing his patients gain confidence with their new figure is his biggest motivator. "That never gets old!"

By staying current with the latest technologies and techniques to provide safe, effective, and minimally invasive procedures for his patients Dr. Hall makes sure to meet with every patient to ensure that the results meet or exceed the expectations of his clients.
